

Case study:

Driving business expansion across Africa

Overview

Interswitch, Africa's leading integrated payments and digital commerce company, embarked on a major strategic project to expand its payments processing business across the continent. The company identified the need to replace its two separate Card Management Systems (CMS) with one in-house payments platform. The focus was to adopt a more efficient system that was easier to maintain, with greater flexibility for modifications and enhancements. Following a rigorous selection process, Interswitch chose to migrate its entire credit card processing business to the award-winning, open development payments platform TranzAxis, from Compass Plus Technologies.

Compass Plus Technologies completed the extensive multi-phased project fully remotely, whilst navigating various Covid-19 restrictions. Today, Interswitch's major bank customers are using TranzAxis for Visa and Mastercard credit card issuance. This major overhaul also helped the processor to further expand its Verve brand, leading to the launch of a new revolving credit card product in collaboration with Sterling Bank of Nigeria.

Objectives

Interswitch's overall mission is to create technology solutions that connect and empower individuals, businesses, and communities in Africa. As an established processor with major bank customers, living up to its mission and maintaining its reputation as a leading processing centre is no mean feat.

Due to ambitious goals and rapid growth, Interswitch undertook a re-evaluation of its core infrastructure, of which the company identified the need to improve its onboarding process and respond to customers' demands, with the swift introduction of innovative products to market.

Following the full reassessment of its payments technology stack, it became clear that the best route forward would be to invest and migrate to an improved platform if it was to continue delivering on its company mission. Following a selection process, the forward-thinking company chose to migrate its entire credit card business to TranzAxis.

Goals

- to improve business and operational efficiency by building a more unified platform
- to reduce time-to-market for the development and launch of innovative products and services, and increase the speed and efficiency of onboarding new banks
- to further strengthen its Verve payment network brand
- to boost the expansive Interswitch footprint across the continent

Outcomes

- supported the successful transition of Interswitch's two separate card management systems with one flexible modern in-house payments platform; migration of major bank customers has begun
- supported the development and launch of Verve revolving credit cards in collaboration with Sterling Bank of Nigeria
- enabled banks to be onboarded in a matter of days
- the partnership contributed to the deepening of Interswitch's business in markets across Africa (including Kenya, Nigeria, Uganda and Ghana)

Solution

Interswitch selected Compass Plus Technologies as its partner for this significant migration project due to its vast experience in delivering extensive modernization projects and migrations from over 30 global card management platforms. The major project saw Interswitch replace its two incumbent card management systems with TranzAxis. By utilising TranzAxis, Interswitch can rely on its extensive API capabilities for seamless integration, which not only aids new market entry by facilitating integration with multiple third parties, such as e-commerce providers and perso bureaus, but also streamlines onboarding and improves time-to-market. Time-to-market is further improved by TranzAxis inheritance functions whereby new products can be created based on existing ones by inheriting and subsequently extending, restricting and/or redefining their parameters in a matter of days or even hours.

Inheritance functions, combined with User-Defined Functions (UDFs) that enable alterations of the system logic and behaviour, ensure Interswitch can develop and launch innovative services quickly and independently. In addition to this, TranzAxis provides operational workflows to segregate system set up in compliance with rules and controls required to scale and meet the unique market requirements that Interswitch operates in.

Results

The complex multi-phased migration of Interswitch's credit card processing business to TranzAxis was delivered fully remotely, all whilst navigating Covid-19 restrictions. Since going live, Interswitch has so far deployed TranzAxis in Kenya and Nigeria, with plans for localised instances in additional countries such as Uganda and Ghana – tailored to meet local regulatory requirements.

The new platform has enabled Interswitch to:

- Migrate all major issuing customers to TranzAxis to manage their credit card business under Visa and Mastercard brands
- Increase the efficiency and speed at which banks are onboarded with one FI boarded in just a matter of days
- Further expand its Verve brand network by launching the first Verve revolving credit card product in collaboration with Sterling Bank of Nigeria
- Enhance the services offered to banks by providing the ability to customise credit card products and set up new rules to meet the regulatory requirements in each country
- Expand its technology hubs domiciled in Nairobi, Kenya, providing the capability to process transactions and onboard new banks across Africa, with localised instances for each country carefully tailored to meet each FI's unique needs

"...this partnership with Compass Plus Technologies aligns with our commitment to making payments easy and convenient. Migrating our card processes to the TranzAxis platform will allow us to further improve our service offerings as we remain focused on providing cutting-edge solutions that optimise service delivery."

Akeem Lawal

Managing Director, Interswitch Purepay.
